# Energy Management Smart Modular Power Analyzer Type WM40 96

- Front dimensions: 96x96 mm
- Front protection degree: IP65, NEMA4x, NEMA12
- Optical front communication port (ANSI type 2)
- Up to one RS232 or RS485 port (on request)
- Communication protocol: MODBUS-RTU, iFIX SCADA compatibility
- MODBUS TCP/IP Ethernet port (on request)
- BACnet-IP over Ethernet port (on request)
- Up to 6 digital inputs for tariff selection, "dmd" synch, gas/water (hot-cold) and remote heating metering (on request)
- Up to 8 static outputs (pulse, alarm, remote control) (on request)
- Up to 6 relay outputs (pulse, alarm, remote control) (on request)
- Up to 16 freely configurable alarms with OR/AND logic linkable with up to either 4 relay outputs or up to 6 static outputs (on request)
- Up to 4 analogue outputs (+20mA, +10VDC) (on request)

- Class 0.5 (kWh) according to EN62053-22
- Class C (kWh) according to EN50470-3
- Class 2 (kvarh) according to EN62053-23
- Accuracy ±0.2% RDG (current/voltage)
- Instantaneous variables readout: 4x4 DGT
- Energies readout: 9+1 DGT
- System variables: VLL, VLN, A, VA, W, var, PF, Hz, phase-sequence, phase-asymmetry and phaseloss.
- Single phase variables: VLL, VLN, AL, An (calculated or real depending on the option), VA, W, var, PF
- Both system and singles phase variables with average, max and min calculation
- Direct neutral current measurement (on request)
- Harmonic analysis (FFT) up to the 32nd harmonic (current and voltage) with harmonics source detection
- Four quadrant energy measurements (imported/exported): total and partial kWh and kvarh (inductive and capacitive) or based on 4 different tariffs (on request)
- Energy measurements according to ANSI C12.20, CA 0.5, ANSI C12.1 (revenue grade)
- Gas, cold water, hot water, remote heating measurements (on request)
- Run hours counter (8+2 DGT)
- Real time clock function
- Data stamping of up to 10,000 events: alarm, min, max, digital input status, digital output status, resets, programming changing (on request)
- Application adaptable display and programming procedure (Easyprog function)
- Universal power supply: 19 to 60VAC (48 to 62Hz) and 21.6 to 60VDC 90 to 265VAC/VDC

### **Product Description**

Three-phase smart power analyzer with built-in application configuration system and LCD data displaying.

Particularly recommended for the measurement of the main electrical variables.

WM40 is based on a modular housing for panel mounting with IP65 (front) protection degree. Moreover the analyzer can be provided with digital outputs that can be either for pulse proportional to the active and reactive total, partial and tariff energy being measured or/and for alarm outputs. The instrument is equipped with optical communication port, further I/O's such as: RS485/RS232, Ethernet, BACNet-IP communication ports, pulse and alarm outputs and 6 digital inputs are available on request. Parameters programming and data reading can be easily performed by means of Wm40Soft.

**NOTE:** (1) Only one A type module per meter in a maximum combination of 3 total mixed modules on the same meter. (2) Only one A + B type module per meter in a maximum combination of 3 total mixed modules on the same meter. (3) Only one C type module per meter in a maximum combination of 3 total mixed modules on the same meter. (4) Only one "B" type module per meter in a maximum combination of 3 total mixed modules on the same meter.

The B-C position is not mandatory, if to fulfil the application, module "A" is not necessary, then maybe just "B" can be mounted. Another example: if modules "A" and "B" (anyone) are not needed, then just module "C" maybe be mounted. If "A" module is needed, it is mandatory to put it in "A" position. When no modules are mounted, then WM40-96 becomes a simple indicator.

# Tariff energy meters and time period management

NOTE: only in case of M F I6 R4 and M F I6 O6 modules.

Meters Total Partial Tariffs Time periods Pulse output	4 (up to 10 digit) 72 (up to 10 digit) Up to 6 Up to 3 year Connectable to total and/or partial meters	"Holiday Period" energy meters "Tariff" energy meters	Up to 10 for this specific function s may split into "H1 H10". As per standard period management every single one can be set by month and year. Up to 6 per period (P1/P2
Storage	Consumption history by storing the monthly energy meters (12 previous months) into the EEPROM. Storage of total and partial energy meters. Energy meter storage format (EEPROM) Min 9,999,999,999.9 kWh/kvarh Max. 9,999,999,999.9 kWh/kvarh		and H1 H10). Every tariff is daily based and is called "t1" "t6". The single tariff can be set as "Hours and minutes". Every single tariff "t" may has an independent start and stop which may be different also from period to period "P1 and P2". Every single tariff manages an independent energy
Energy Meters "Total" energy meters	Base on digital inputs and clock management +kWh, +kvarh, -kWh, -		meter which is split according the measured energy in: +Wh, -Wh,
"Standard Period" energy meters	kvarh. Up to 2 may split into "P1" and "P2" which can be set by month and year each.	Partial energy meters	+varh, -varh. +kWh, +kvarh, -kWh, - kvarh (basic unit without any module)

#### Fig. 1 Daily management TOTAL +kWh +kwn -kWh +kvarh -kvarh (t1)+kWh Wh 5 -kWh +kvarh t6 t1 6 3 (t2 10 t3 +kWh (t4) t2 t5 +kWh -kWh kWł +kvar -kvarł t3

#### Tariff energy meters overall working scheme

NOTE: only in case of M F I6 R4 and M F I6 O6 modules.

Where P1 and P2 are the "Standard Periods" and H1 ... H10 Holiday periods which are identified by a defined day (non working day), by a vacation period or by a season period.

Where t1 to t6 are the "Tariffs".

**Note:** the displaying of every single energy tariff is relevant only to the period being used. Other periods are available through the communication port.

#### **Energy meters**

Meters Total Partial Pulse output	4 (10 digit) 4 (10 digit) Connectable to total and/or partial meters	<b>Energy Meters</b> Total energy meters Partial energy meters	+kWh, +kvarh, -kWh, -kvarh +kWh, +kvarh, -kWh, -kvarh
Energy meter recording	Storage of total and partial energy meters. Energy meter storage format (EEPROM) Min9,999,999,999.9 kWh/kvarh Max. 9,999,999,999.9 kWh/kvarh.		

### Management of the digital inputs

NOTE: only in case of M F I6 R4 and M F I6 O6 modules.

Function	Note	Digital inputs					
Function	Note	1	2	3	4	5	6
Synch (dmd)	(1)	YES					
Tariff change	(2)	YES	YES	YES			
Hot Water	(3)				YES	YES	YES
Cold Water	(3)				YES	YES	YES
Gas	(3)				YES	YES	YES
Remote heating	(3)				YES	YES	YES
Remote alarm reset	(4)				YES		
Trip counter of protection	(5)				YES		
Remote input channel status	(6)	YES	YES	YES	YES	YES	YES
kWh counting (-)	(7)			YES			
kWh counting (+)	(7)				YES		
kvarh counting (+)	(7)					YES	

Note: every single digital input can be configured according to the table above.

(1) At each status change (from OFF to ON) it synchronises the DMD calculation made by the meter with a digital signal coming from the Utility or other source. It also synchronises the clock to the multiple of the integration time (which is selectable as either database of data-logging function or Load profile) nearer to the current time.

(2) It is used to select by means of the logic of three inputs up to 6 different tariffs: t1-t2-t3-t4-t5-t6. Every time the tariff changes, it starts also the synchronisation of the "dmd" calculation.

(3) It is used to count the pulses coming from different Utility meters like: cold water, hot water, gas and remote heating.

(4) It is used to remotely reset the alarms.

(5) It is used to count how many times an external protection device trips.

(6) This function is available only in case of serial communication. It allows to detect the status of the digital input. The status is displayed on the display as well.

(7) The energy is metered by means of pulses coming from a watt-hour meter. This meter can be provided with up to 3 outputs (for imported active and reactive energy and for exported active energy). Note: the pulses counted from the watt-hour meter replaces the standard measurement of energy and the relevant displaying (total, partial and tariff), all other measurements (eg: V-A-W-VA-var, THD and so on) are still performed and displayed.

### Harmonic distortion analysis

Analysis principle Harmonic measurement Current Voltage	FFT Up to the 32nd harmonic Up to the 32nd harmonic	Harmonic phase angle	The instrument measures the angle between the single harmonic of "V" and the single harmonic of "I" of the same order.	
Type of harmonics	THD (VL1 and VL1-N) THD odd (VL1 and VL1-N) THD even (VL1 and VL1-N) TDD The same for the other phases: L2, L3. THD (AL1) THD odd (AL1) THD odd (AL1) THD even (AL1) The same for the other phases: L2, L3.		According to the value of the electrical angle, it is possible to know if the distortion is absorbed or generated. Note: if the system has 3 wires the angle cannot be measured.	
		Harmonic details	The harmonic spectrum so to built-up a graph is available only by means of the serial communication.	

# Event logging, data logging and load profiling

#### Back protection rotary switch

Function	Rotary switch position	Description
Unlock	1	All programming parameters are freely modifiable by means of the front key-pad and by means of the communication port.
Lock	7	The key-pad, as far as programming is concerned and the data through the serial communication cannot be changed (no writing into meter allowed). Data reading is allowed.

### Accuracy (According to EN50470-3 and EN62053-23)

## Used calculation formulas

#### Phase variables

Instantaneous effective voltage  $V_{1N} = \sqrt{\frac{1}{n} \cdot \sum_{1}^{n} (V_{1N})_{i}^{2}}$ Instantaneous active power  $W_{1} = \frac{1}{n} \cdot \sum_{1}^{n} (V_{1N})_{i} \cdot (A_{1})_{i}$ Instantaneous power factor  $\cos\varphi_{1} = \frac{W_{1}}{VA_{1}}$ Instantaneous effective current  $A_{1} = \sqrt{\frac{1}{n} \cdot \sum_{1}^{n} (A_{1})_{i}^{2}}$ Instantaneous apparent power  $VA_{1} = V_{1N} \cdot A_{1}$ 

Instantaneous reactive power  $var_1 = \sqrt{(VA_1)^2 - (W_1)^2}$ 

#### System variables

Equivalent three-phase voltage  

$$V_{\Sigma} = \frac{V_{1} + V_{2} + V_{3}}{3} \cdot \sqrt{3}$$
Voltage asymmetry  

$$ASY_{LL} = \frac{(V_{LL \max} - V_{LL \min})}{V_{LL} \Sigma}$$

$$ASY_{LN} = \frac{(V_{LN \max} - V_{LN \min})}{V_{LN} \Sigma}$$
Three-phase reactive power

 $\operatorname{var}_{\Sigma} = \left(\operatorname{var}_{1} + \operatorname{var}_{2} + \operatorname{var}_{3}\right)$ 

Three-phase active power

 $W_{\Sigma} = W_1 + W_2 + W_3$  Three-phase apparent power

$$VA_{\Sigma} = \sqrt{W_{\Sigma}^2 + \mathrm{var}_{\Sigma}^2}$$

Total harmonic distortion

$$HD_{N} = 100 \frac{\sqrt{\sum_{n=2}^{N} |X_{n}|^{2}}}{|X_{1}|}$$

Three-phase power factor  $\cos \varphi_{\Sigma} = \frac{W_{\Sigma}}{VA_{\Sigma}}$  (TPF)

#### **Energy metering**

$$k \operatorname{var} hi = \int_{t_1}^{t_2} Qi(t) dt \cong \Delta t \sum_{n=1}^{n_2} Qnj$$

$$kWhi = \int_{t_1}^{t_2} Pi(t) dt \cong \Delta t \sum_{n_1}^{n_2} Pnj$$

Where:

i= considered phase (L1, L2 or L3) P= active power; Q= reactive power; t<sub>1</sub>, t<sub>2</sub> =starting and ending time points of consumption recording; n= time unit; $\Delta$ t= time interval between two successive power consumption; n<sub>1</sub>, n<sub>2</sub> = starting and ending discrete time points of consumption recording

T

## Wm40Soft parameter progr. and var. reading software

Wm40Soft

Working mode

Multi-language software (Italian, English, French, German, Spanish) for variable reading, instrument calibration and parameters programming.The program runs under Windows 98/98SE/2000/NT/XP/Vista Three different working modes can be selected: - management of local RS232 (MODBUS);

Data Storing

Data Transfer

management of local optical port (MODBUS);
management of a local RS485 network (MODBUS);
In pre-formatted XLS files (Excel data base).
Manual or automatic at programmable intervals.

## Alarm parameters and logic (programmable only by means of Wm40Soft)

Specifications are subject to change without notice WM40 96 DS 270510

## RS485 and RS232 wiring diagrams

**NOTE.** RS485: additional devices provided with RS485 are connected in parallel. The termination of the serial output is carried out only on the last instrument of the network, by means of a jumper between (B+) and (T). (A): the communication RS232 and RS485 ports **can't be** connected and used simultaneously.
